Professional Summary

Python Backend Developer with 1+ year of experience in web development, database applications, and software support. Skilled in building REST APIs, working with PostgreSQL and SQL Server, and developing backend applications using Python and Flask. Experienced with authentication systems, database design, Git, Docker, and cloud fundamentals. Passionate about building scalable backend solutions and continuously improving software development skills.

Technical Skills

Programming Languages:

Python, SQL

Backend Development:

Flask, REST APIs, JWT Authentication, CI/CD Pipelines

Database:

PostgreSQL, SQL Server

Tools & Technologies:

Git, GitHub, Docker, Postman

Operating Systems:

Linux, Windows

Cloud:

Microsoft Azure (AZ-900), AWS Cloud Practitioner

Frontend:

HTML, CSS, JS, React (Basic)

Professional Experience

SQL Developer | Balbhas Business Sysnomics LLC

January 2026 – Present

- Developed SQL queries for data extraction, transformation, reporting, and business requirements.
- Created and maintained stored procedures in Microsoft SQL Server.
- Generated operational and business reports using SQL-based solutions.
- Investigated and resolved database-related issues through ticketing systems.
- Collaborated with application teams to support database operations and improve query performance.
- Assisted in troubleshooting data quality and reporting issues.

Web & Database Developer | Cloud Hawk
January 2024 – February 2025

- Developed and maintained web applications and websites for business clients.
- Worked with databases, SQL queries, data retrieval, and application support activities.
- Assisted in website customization using HTML, CSS, JavaScript, and CMS platforms.
- Collaborated with team members to troubleshoot technical issues and implement enhancements.
- Participated in deployment, maintenance, and support of client applications.
- Utilized Git for version control and project collaboration.

Projects

Workforce Management System

Tech Stack: Python, Flask, PostgreSQL, JWT, Docker

- Developed a backend system for managing employees, jobs, timesheets, and role-based access control.
- Implemented user authentication and authorization using JWT.
- Designed PostgreSQL database schemas and integrated SQL Alchemy ORM.
- Developed REST APIs for employee management, job tracking, and timesheet functionality.
- Containerized the application using Docker for simplified deployment.

Doctor Appointment Management System

Tech Stack: Python, Flask, PostgreSQL, Docker

- Developed a web application for managing doctor appointments and patient records.
- Implemented authentication, CRUD operations, and database integration.
- Designed and managed PostgreSQL database tables and relationships.
- Utilized Docker and Git-based workflows for development and deployment.

Certifications

Microsoft Azure Fundamentals (AZ-900)

AWS Certified Cloud Practitioner (CCP)

Python & SQL

Education

Bachelor's Degree in Computer Science
Kongunadu Arts & Science College
2020

Master's Degree in Computer Science
Scott Christian College of Arts & Science
2022
